Improvements to the aSAP Equipment Catalogue Search

Wednesday 2nd September 2020

Accessible has listened to your feedback on the challenges you experience with the search function in the equipment catalogue in aSAP.

We realise this is a key resource for you and that we needed to improve this feature and have been working hard to achieve this.

We are pleased to inform you that we will be releasing the following improvements with the catalogue from **Monday 7th September 2020**.

The key areas we have improved are:

- We have analysed the purchase volumes of equipment and have removed 7544 items that have not been ordered or ordered in very low volumes.
This equates to approximately 40% of the current line items that display in the portal.
- This change has reduced the number of pages you are needing to search through, with 230 pages removed.
- A change to the classification levels where you find specific items.
We have moved Cushions and Backrests from level 3 up to level 2 to split these sub-categories. We have also split Showering and Toileting into 2 separate categories.
- Ease of searchability within the catalogue for the item you need.

We will be updating our videos and resource materials in the next few weeks to reflect these changes.

In the meantime, for any questions you may have please contact our team by emailing asap@accessible.co.nz and we will be in touch.

Thank you

Team Accessable
